Expanding EMC's Nuclear & Pump Capabilities

Electric Motor and Contracting Co. Inc. (EMC) is proud to announce an expansion of its Nuclear Capabilities through the growth of our Chesapeake Facility.

The ongoing expansion is a major part of the EMC continuous improvement process and aligns with our core value of providing "World Class" products and services that continually meet or exceed the expectations of our customers.

NEW CONTAMINATED
SERVICE CENTER

NEW PUMP
REPAIR FACILITY

This state-of-the-art facility expansion will offer 22,000 square feet of "High Bay" space and boast 120 tons of lifting capacity with 50 feet under the hook. It will house the Radiological Contaminated Equipment Repair Facility, which is being specifically designed for the decontamination, repair, testing, storage and handling of radiologically contaminated equipment for the Nuclear Power Industry.

EMC is also pleased to announce the completion of our new Pump Service Center, which will be conveniently located on our Chesapeake campus. The Strategic location of these facilities will allow us to take full advantage of our Flagship resources, respond on-demand to individual project needs and provide our customers with the best value in the industry.

Contaminated Service Center

Scheduled for completion September 2010

Pump Shop

Scheduled for completion November 2009
